

# ACS T2 Live! Dual Driver In-Ear Monitor

## Product Strapline

The benchmark of silicone in-ear monitor design raises the bar.

## Short Description

The T2 Live! brings over 2 years of research and development together representing a new standard in dual driver in-ear monitoring. With the introduction of a new integrated crossover and a proprietary replaceable cable system the T2 Live! offers an enviable feature set brought about with meticulous attention to detail and design. Its all-new dual driver configuration creates a fresh paradigm for sound in its class combined with the impeccable fit and comfort created by the discreet soft silicone mould, the result is an in-ear monitor that gives you impeccable clarity and comfort offering you complete control of your personal sound environment.

Part Code	T2L
Rev. Date	11/11

## Full Description

### A completely fresh approach

The T2 Live! represents a completely fresh approach to dual driver in-ear monitor design with a complete ground-up redesign. The all-new dual driver design and custom crossover bring improved range, clarity and accuracy to the T2 Live! giving you an in-ear monitor with power and breadth that are ideal for the live environment whilst keeping your sound accurate enough for mix monitoring and intricate vocal performances. The T2 Live! brings new depth and sparkle to your sound and to your performance.

### The same accommodating approach

Just like any ACS product, the T2 Live! is manufactured from soft medical grade silicone giving you a fit like no other earpiece. We use the softest material in the industry to give you unparalleled isolation in the most demanding environments with a consistent seal at all times and, because your earpiece can flex with your ear as you move or sing, your monitors stay comfortable without fatigue or irritation. In addition to comfort and isolation, using silicone allows us to seal the speakers into the mould and take control of their acoustic environment, this means we leave no room for the shape of your ear to affect how your monitors will sound or for your drivers to misbehave so they sound just as our technicians intended every single time.

### So much thought into such a small object.

ACS in-ear monitors are designed and produced according to some simple principles that we think help us to focus on what's important rather than just chasing the pack. Our earpieces are flush and discreet in the ear, we don't just throw more drivers into the mix in the hope that it will make the monitors sound better, particularly if that means delivering ear shattering volumes. We pay attention to every aspect of the T2 Live!, from the 3.5mm plug right to your eardrum to make sure it's performing as it should and we don't do as others do if we don't believe it is right. Based on our proprietary cable design, the Live! Series offers removable cables featuring one of the smallest and most resilient connections around. Keeping the connector as small as possible means that we can keep the cable discreet and mounting the socket right in the silicon means your cables will stay put in performance but come loose if the cable is pulled from the ear minimising the risk of damage. Not only that but by simply moving the pins from the plug on the cable to the socket in your monitor we've minimised the chances of damage to the cable even when it's not connected. With the pins in the socket sunk into your earpiece there is no chance of them coming to harm and with no pins at the cable end at all it'll take a lot more than a size 13 Doc Marten to put you in need of a replacement.

### And in 2012 another revolution at ACS takes place.

Every T2 Live! has a pair of built-in, sub miniature, wideband, flat response microphones! Interfacing our new ambient sound processor between the wireless belt pack and your T2 Live! in-ear monitors, will allow you to introduce and adjust your ambient surroundings independently from the mix. Imagine being able to control the outside sound and safely eliminate the isolation experienced by wearing good sealing in ear monitors. With the arrival early next year of our Live! series ambient processor, isolation will become a thing of the past. Plug in and experience your own individual sound environment as though you have nothing in your ears!

# ACS T2 Live! Dual Driver In-Ear Monitor

## Technical Specification

Frequency Response	16Hz ~ 20kHz
Impedance	29 Ohms
Isolation	27 dB
500 Hz Sensitivity	111dB/0.1v RMS (112.5dB/mW)
Weight	24g Net   243g Gross   Average weight will vary according to ear size
Build Material	40 Shore Medical Grade Silicone
Mould Type	Full Concha
Standard Colour	Clear with Black Cable
Included Accessories	Instruction Leaflet, Step-Up Adaptor, Wax Pick, Comfort Cream, Carry Pouch, Flight Case, Cable
Optional Accessories	Extension Cable, Spare Cable
Package Dimensions	147mm x 50mm x 100mm
Warranty Period	1 Year against manufacturing and component failure

## Build options

Colour (Clear Default) - SRP £10	The T2 Live! can be produced in any colour from our current colour chart
Laser Etching (None Default)	The T2 Live! includes laser etching up to 10 characters
